

TUTIMA

SAXON ONE

STATEMENT IN STEEL

Tutima Glashütte's flagship model creates a new style in the world of German watches.

Right on cue for the official sales launch, Tutima presents the flagship model of its new watch family to the public: the SAXON ONE symbolises sportiness and toughness – and also delivers unmistakable aesthetics.

Even the name SAXON ONE heralds the start of a new timekeeping era: this striking chronograph exudes the immense vitality of the relaunch of the traditional brand that was founded in Glashütte in 1927. The unique design and 44 millimetre diameter of this watch have created a revolutionary new style amongst the sophisticated timepieces in this price bracket.

In addition to a three-dimensional, pyramid-shaped case, the stainless steel watch boasts various other innovative details. The red reference marker on the rotating bezel is typical of Tutima, whilst the deliberately understated bezel enhances the exclusive character of this model. The chronograph's pushers match the steel architecture and streamlined design perfectly.

A mechanical Tutima calibre 521 chronograph movement was chosen to power the watch. This means that in addition to a permanent 24-hour display, the SAXON ONE can also deliver the rare option of a sweep minute counter, which enables optimum reading of the minutes that have elapsed in each case. This in-house development was designed primarily with the new Tutima M2 model in mind. The M2 replaces the Tutima NATO Chronograph 798 with Swiss Lemania calibre 5100, which is no longer produced.

Whether fitted with a luxurious alligator leather strap or a stainless steel bracelet – each with folding clasp – the SAXON ONE is the perfect companion, not only on stylish occasions but at all times.

www.tutima.com

The heart of the chronograph is the proprietary designed Tutima calibre 521 with sweep minute counter. The antique grey winding rotor features the Tutima seal in 750/000 fine gold.
