## VISIONNAIRE COLLECTION

### FABERGÉ VISIONNAIRE CHRONOGRAPH & FABERGÉ VISIONNAIRE DTZ

Inspired by the pre-1917 Fabergé Imperial Eggs, the Fabergé Visionnaire Collection was created in association workmasters, which combine the science of measuring time with the imaginative freedom of Fabergé. Faithful to their heritage, these timepieces celebrate the unexpected with a unique surprise at the heart of each watch.

The Fabergé Visionnaire DTZ adopts a logical and intuitive method of displaying two timezones simultaneously. The hours and minutes of the local timezone are presented with peripheral, open-worked hands rotating around a raised, decorated dome located at the centre of the dial. The hour of the second, remote timezone can then be viewed through an aperture at the centre of the dome.

The Fabergé Visionnaire Chronograph adopts a similar logic. Hours and minutes are read at the periphery of the watch dial while the chronograph function takes centre stage. The automatic calibre 6361, developed in partnership with Agenhor, offers a new intuitive chronograph display. It is a revolutionary new movement that imparts unprecedented clarity, precision and efficiency to the highly popular chronograph complication. It is the modern-day analogue to a Fabergé egg — a mechanical opus with wonder at its heart.
