## P68 PATHFINDER AUTOMATIC

### FOR GLOBETROTTERS AND EXPLORERS

The timepiece that was built to make your dreams of adventure come true. 24/7. Under all possible weather conditions. At any time, day or night.

The P68 Pathfinder Automatic is dedicated to self-determined and self-confident individualists who transform their ordinary days into adventures. This collection captivates with clear lines. The purist case of blackened stainless steel is peppered with fine details: matt surfaces skilfully alternate with polished edges to add a touch of understated sophistication to the watch.

A glimpse inside the case reveals the secret of the P68 Pathfinder Automatic: a compass ring, which can be operated with one hand via the crown at 8 o'clock. This ring, used in combination with the position of the sun and the hour hand, enables the wearer to easily establish their current position and the cardinal directions.

Light is the primary element of the P68 Pathfinder Automatic and of all the other traser models – traser, the inventor of the self-powered illumination technology trilight®. Assuring perfect visibility, even in the most demanding environments, trilight® functions without the need for external light or energy sources.

When night falls, a unique spectacle of light and colours begins on the time display. After the Super-LumiNova elements have faded, trilight® takes over the leading role. The luminous pipes transform into the brightest stars on your wrist and continue to guide you reliably until dawn.

Illumination: trilight® self-powered technology for the hours indexes and hands Super-LumiNova for the direction indicator on the compass ring, external numerals on the dial and luminescent glass seal. Movement: Swiss Made automatic movement, date window at 3 o'clock. Power reserve: 38 hours. Size: Ø 46 mm. Glass: Anti-reflective sapphire Case: Black PVD-coated stainless steel with matt polished details. Screw-down crown. Dial: Midnight-blue sun-brushed. Compass ring: Integrated in the case. Operated via the crown at 8 o'clock. Strap: Midnight-blue NATO strap with a thin gold-yellow line. Waterproof: 10 ATM / 10 bar.
