## KLONDIKE MOONPHASE

### INSPIRED BY THE STARS, DESIGNED TO PERFORM

The Delma Klondike Moonphase, preselected in the Calendar Category of the 2017 Grand Prix d'Horlogerie de Genève, recently returned to Switzerland from its whirlwind tour with the crème-de-la-crème of global watch brands.

Born out of more than 90 years of a family-led passion for Swiss watch-making, the Klondike Moonphase represents the peak convergence in innovative design, steadfast performance and elegant styling. A focal point of the Delma Racing Collection, characterised by advanced watch design quality, aesthetic excellence and functional navigation ease, the Klondike Moonphase celebrates the energy of life with unparalleled precision, style and durability.

Celestial guidance, an essential skill of seasoned navigators and a joy of ardent stargazers, inspired the striking design of this automatic chronograph. The full calendar, moon phase, and distinctive day-and-night indicator, on which a star-scattered night sky is intricately offset by a radiant depiction of the sun, combine beautifully to make this watch a unique and elegant timepiece.

Mirroring a full and vibrant life, the rotating disc urges you to keep up the pace by illustrating the exhilarating rhythm of day and night. The moon phase indicator beneath the chronograph's hour counter and the pointer date hand with a small red half-moon add further distinctive touches.

---

The Klondike Moonphase automatic chronograph features a sophisticated day-and-night indicator inspired by centuries of celestial navigation. A transformation of the sun into a night sky sprinkled with stars atop a rotating disc suitably depicts the progression of time. The see-through case back showcases the decorated, Delma-customised automatic movement to let you witness the pulsating balance wheel and the oscillating mass of the self-winding movement.
