

FABERGÉ

VISIONNAIRE

A REVOLUTIONARY CHRONOGRAPH

Fabergé has again pushed the boundaries of technical innovation with a powerful new addition to the Fabergé Visionnaire collection.

The automatic calibre 6361, developed by award-winning movement specialist Agenhor, is a revolutionary movement that imparts unprecedented clarity, precision and efficiency to the chronograph complication. The Fabergé Visionnaire Chronograph marks a new standard in charting time: the hours and minutes are read at the periphery of the watch dial while the chronograph function takes centre stage, offering a new intuitive display that is radically different from that of any other chronograph ever made.

The Fabergé Visionnaire Chronograph is available in rose gold or black ceramic.

It is the modern-day analogue to a Fabergé egg – a mechanical opus with wonder at its heart. As an homage to the unfinished Constellation Egg of 1917, the Visionnaire Chronograph carries a laser-engraved etching of the egg, visible only to those who know where to look for it.

Fabergé is honoured to be the first to introduce a chronograph that houses this ground-breaking movement, which deploys five horologically significant patents and nearly a decade of development.
