CALIBER 0100

THE WORLD'S MOST ACCURATE TIME-KEEPING

The Japanese brand unveils three new Eco-Drive models that deliver the world's most precise time-keeping accuracy: within ± 1 second per year.

Caliber 0100. The world's most accurate light-powered watch. Accurate to within one second per year; it keeps telling the right time.

It is impossible to make a watch accurate to within one second per year without insisting on extreme precision in all the components that go into that watch.

Eco-Drive has been continuously improved for over 40 years. By combining multiple technologies developed over this time, CITIZEN has created Caliber 0100.

It is an Eco-Drive watch that marks — and keeps marking — each pure, individual second, beautifully, confidently and proudly.
