

FRANCK DUBARRY

DIVER GREEN CARBON

MADE FOR THE SPORTING ELITE

Franck Dubarry has been bringing creativity and innovation to watchmaking for decades. He now plays with diving watch codes, adding some revolutionary elements.

The "hyperactive" concept is intrinsic to the brand's collections: use of innovative designs and cutting edge technologies in sporty yet elegant mechanical timepieces made for extreme performance. The brand has conquered the world sport elite and enjoys the support of World Champions and Olympic gold medalists in various disciplines.

This specific Diver model shares the iconic 43mm faceted stainless-steel case with a black ADLC treatment, fitted with a 40-hour power reserve DD14580 automatic movement. The composite carbon bezel with color inclusions tops a complicated 5-part dial made of 12 components. Two laser-cut wheels displaying the big date are partially covered by a revolutionary green translucent resin. Minute and hour hands are engraved with a tattoo pattern that is a characteristic of the designer's creations. The exclusive Elastogator strap and its rubber alligator imprint is 100% water resistant and is attached to the integrated lugs for an ergonomic fit. The Diver collection is available in 4 different versions: Black, Green, Orange, and with Damascus Steel.

The Neoralithe translucent resin used on the dial is a revolutionary material. UV, thermal and shock resistant, it partially covers a laser-cut big date. The carbon bezel and dial resin inserts come in 3 different colors variations.
