MU04 GMT SPORT

INSPIRED BY THE PAST, SHAPING THE FUTURE

The sturdy and sophisticated new GMT Sport timepiece created by Mauron Musy takes the Armure collection into new worlds: sport & travel. Certified "Swiss Crafted" and inspired by racing cars, this new model is equipped with a second 24-hour time zone engraved on a titanium-ceramic bezel.

Entirely crafted in titanium and recognisable by its ultra-mechanical DNA, the new GMT Sport model is the ideal avant-garde partner for all settings. Its industrial design and brushed finishes endow it with a unique style that goes equally well with a racing driver's helmet or a gentleman's suit.

The mechanical self-winding MM01-GMT movement, developed in collaboration with Manufacture La Joux-Perret, is endowed with a 55-hour power reserve. The hybrid ceramic and titanium bezel features a 24-hour scale enabling dual-time readings, while the colour difference marks the boundary between day and night.

Mauron Musy is the only watch brand in the world to have developed a mechanical gasket-free water-tightness system completely free of the costly maintenance associated with polymer ageing. This patented nO-Ring® method of mechanical gasket-free water-resistance, featuring a design whose very essence is intrinsically linked to the technology involved, requires 36 highly technical elements and ensures a waterproof seal guaranteed to 300 metres.

The dial of the MU04 GMT Sport is machined in a single operation using state-of-the-art laser technology. It features a very rough cast iron texture inspired by car engines. The hour-markers and cartouches are machined using the champlévé technique. The raised numerals light up in the dark thanks to a luminescent ceramic.
