

ORIENT STAR

CLASSIC AUTOMATIC MOON PHASE COLLECTION

TWO NEW BRACELET ADDITIONS

Orient Star has introduced two stainless steel bracelet versions of its elegant Classic Automatic Moon Phase range.

First launched in 2018, this collection balances a power reserve indicator, with semi-skeleton and Moon Phase functions together with sophisticated design elements that reflect generations of independent Japanese watchmaking.

The calibre F7X62 offers a 40-hour power reserve with indicator and three-hand dial with hand-winding functionality. These timepieces are expertly hand assembled by Oriental horologists in the mountains of Akita, Japan, in accordance with the Japanese

principle of *monozukuri*, meaning the art and science of manufacturing.

The movement is housed within a 41mm stainless steel case, with super anti-reflective coating and water resistance to 50 metres. The latest additions are available with solid stainless steel bracelets and cases, coupled with either a classic black or ice white dial.
