

TITONI LINE 1919

EQUIPPED WITH THE FIRST IN-HOUSE CALIBRE

Titoni's latest series, the Line 1919, presents the company's first ever self-developed and manufactured movement. The name of this series pays homage to the year in which Titoni was founded.

The Line 1919 celebrates Titoni's long-standing promise to produce classic timepieces that remain true to the finest tradition of Swiss watchmaking. The first ever self-developed and self-manufactured movement in Titoni's history, the T10 calibre, ticks at the heart of all models in this series.

The design of this series is inspired by purist minimalism and

brings timeless elegance into line with our future course. The use of a box-shaped sapphire glass gives the watch a slimmer and more refined look. The minimalist design, enhanced by a bigger date window and faceted hour indexes at three, six, nine and twelve o'clock, makes reading the time easy and comfortable at a glance.

The transparent case back of this series comes with a larger window offering a fascinating view of Titoni's first ever self-developed and self-manufactured automatic movement. The golden skeletonised oscillating weight allows an even clearer insight into the delicate and decorative architecture of the movement.

LINE 1919 (Ref. 83919 S-612)

The sun-ray brushed dials come in three colour finishes: silver, anthracite and navy blue, while the year 1919 is marked in red on all models to lend a subtle touch of fresh sparkle. The T10 movement has a power reserve of approx. 3 days (68-75 hours).
