## COSMO AUTOMATIC

### A MODERN INTERPRETATION OF A CLASSIC

TITONI is one of the few remaining independent family-owned watch companies in Switzerland. Three generations of the Schluep family have gone their own way for decades, and each of them has pursued a long-term vision to guarantee the company's stability and continuity.

At the heart of TITONI's philosophy stands its credo to produce Swiss-made mechanical watches of the highest quality at affordable prices. With almost a century old heritage, the company is fully dedicated to offering its clients first-class timepieces that live up to its high standards.

Today, TITONI is proud to introduce its latest product novelty: The Cosmo Automatic. This collection comes in a fresh design as an addition to the Cosmo Series, generally known for its glamorous timepieces with exquisite details, giving it a more rejuvenated and modern interpretation.

The unique wave-shaped fluted bezel - inspired by the geometric form of a seashell - seems to extend the watch dial into an invisible flow of space and time and the faceted hands and indexes lend further charisma and glamour to its overall look.

The new collection is available either with a stainless steel bracelet or leather strap, both equipped with a solid and decorative folding clasp offering high wearing comfort as well as style. The steel bracelet impresses with a mixture of brushed and polished links that playfully interact with light while the beautiful colour options of the leather strap (available in charcoal grey, dark brown or navy blue) set an elegant tone of their own.

This collection is a worthy addition to the classic Cosmo Series and reflects TITONI's true passion for the fine art of watchmaking - a heritage the Swiss family business has embraced for generations.
